

BELGIAN BIOPACKAGING

Association

The Belgian BioPackaging association was founded in 2006 and was the result of initiatives taken by companies involved in the production or use of compostable packaging made from renewable resources.

Services

The main target of the association was and still is to get the green waste bin open for certified compostable packaging and disposables.

Although not yet realised, the Belgian BioPackaging association obtained with targeted lobbying work some important modifications to the local waste legislation and supported the creation of the first law (royal decree) in Europe that defines the terms "compostable", "home compostable" and "degradable in the soil". This same law prohibits the use of the term "biodegradable" on the packaging.

Where the end-of-life of the products was our first focus, we now decided also to give more attention to the organic origine of the raw materials, the renewability of the basic material.

The Belgian BioPackaging association is a platform for its members to share information and exchange news on bio-packaging and/or other compostable products made from renewable materials (and not only bio-plastics).

BELGIAN BIOPACKAGING VZW/ASBL

Foundation

- 2006

Branches

- End-of-life options
- Information and news exchange on bio-packaging and/or other compostable products made from renewable materials
