

since 1991

PLASTRANS TECHNOLOGIES

➔ Materials

- Biobased / bio-attributed Bio PP, Bio PE, Bio PS
- Biobased & Biodegradable: PLA, Starch - blends, Thermoplastic Starch, CaCO₃ masterbatches, Talc masterbatches, PBAT, PBS, Polyamides
- Circular polymers: PE, PP, PS
- Compounds/Specialties: Value-added applications, cable, pipes, filled PO-Compounds, barrier resins

➔ Key Topics:

- Bio-based materials
- Circular Economy Initiatives
- Sustainability partnerships
- Innovation and research
- Corporate Social Responsibility (CSR)

➔ Key Services:

- Supply of Sustainable Polymer Solutions
- Customized Product Solutions
- Technical Support and Expertise
- Environmental Advocacy and Education
- Quality Assurance and Compliance

➔ Certifications:

ISCC Plus
ISO 9001
ISO 14001
PRS Green Lable

YOUR SUSTAINABLE SOLUTION PROVIDER

We deliver **biopolymers, recyclates, and performance polymers** to the polymer converting industry. Since 1991, our family-owned company has been based in Linz, working with premium plastics and environmentally friendly innovations. Our scope of operations extends across Europe and the MENA region. Today, we are a leading company in the field of sustainable plastic solutions.

In 2018, we embedded in our vision to become the leading provider of bio-based plastics and oriented our company towards offering commercially available **bio-based solutions**. Today, we lead in providing bio-based plastics in our industry. Collaborations with successful companies such as TotalEnergies Corbion, BioLogiQ, or Cabamix form the basis of our success. Recognizing that utilizing all resource-efficient solutions is essential for a successful transformation in the plastics sector, we also collaborate with leading manufacturers of raw materials from plastic waste, such as Multiport or PreZero.

Our commitment extends across a broad range of recycled, bio-based, and biodegradable polymer materials with a reduced carbon footprint. We actively advocate for the circular economy by promoting and disseminating materials that can be **reused and recycled**. It is inherent to us to continually develop the company, to drive innovation and excellence in the industry.
