

Company

We process biogas into liquid Bio-CO₂ and liquid biomethane. We install biogas liquefaction plants, we operate them and market the products. In addition, we exclusively offer a serial hybrid electric bus for city- and intercity buses based on the CMF drive.

Fields of activity

CMF takes over the project development and implementation of Gas-liquefaction plants. We also take care of the sales of Bio-LNG, Bio-CO₂ and greenhouse gas reduction quota.

Associations and bodies

We are part of Fachverband Biogas and member of European Biogas Association, the Chemicals cluster of Bavaria and Bundesverband eMobilität.

CM FLUIDS AG

Foundation: 2015

Turnover: --

Employees: 5

Key topics: Gasliquefaction, Bio-LNG, Bio-CO₂

Key services: project development and project implementation, plant operator

Header Departments

General

- We use existing biogas plants to generate renewable energy through profitable full utilization after their EEG subsidy expires
- Selection of suitable locations
- Design of locations for profitable and climate positive bio-LNG production

Fuels

- We are building decentralized bio-LNG production plants at existing biogas plants
- We produce and sell Bio-LNG, liquid Bio-CO₂ and greenhouse gas reduction quota

Drive

- CMF drive - the sustainable drive concept for buses and trucks
- With the CMF drive we combine the advantages of electric drives with the advantages of internal combustion engine drives
- Braking energy recovery improves the vehicle energy efficiency by up to 30%
- Gas engine operation at optimum efficiency reduces consumption by up to 20%
- Climate positive - well to wheel.
