

Beologic

Company

At Beologic, we have been building a sustainable environment since the start in 2000. As a manufacturer of sustainable compounds we have always been engaged to participate in the conservation of natural resources and environmental protection.

We are actively in pursuit of climate action and creating responsible ways to consume and produce products. This means that we want to create a reduced waste generation that uses our natural resources efficiently. We focus on reducing greenhouse gas emissions with carbon-neutral organization and products. Sustainability is no trend word for us, it is all about measurable actions we take.

We achieve sustainability by finding the right balance between materials, processes, manufacturing and support. By looking pragmatically at all product aspects, we address issues about sustainability globally. We take into account material science, product requirement, production capabilities, project size and price expectations; and of course sustainability. Our ambition to replace plastics by less harmful polymers is driven by our strong belief in a circular economy with bio-based, biodegradable and recycled materials as feedstock. It is a challenging journey in which we progress day by day, step by step, guided by the Sustainable Development Goals.

Why choose Beologic?

We lead by example. As a leading expert solution provider for thermoplastic compounds, we are setting the current standards for sustainability worldwide. Our clients see us as their reliable partner for all their questions about their carbon footprint, sustainability, legislative requirements and state of the art solutions. They also know that we have a wide and unique product portfolio, which allows us to adapt to all their current and future needs. We are driven by our knowledge, our analytical data and by the expertise that we gathered over the last two decades.

What solutions can we offer?

We create sustainable compounds for injection moulding, rotational moulding and extrusion. Whether you're looking for recycled, bio-based, biodegradable or natural filled compounds, we give you all the options you need to realise your dream product. A one-size-fits-all approach doesn't work in sustainability, that's why we manufacture and deliver unique, quality-approved materials each and every time, worldwide.

FOUNDATION

- 2000

EMPLOYEES

- 35

CUSTOMERS & PARTNERS

- Capi Europe
- The Ocean Cleanup
- Velux
- Vinventions
- Kompan
- Total Energies

OUR PRODUCT RANGE

- Beobase: bio-based content
- Beograde: bio-degradable materials
- Beocycle: recycled feedstock
- Beosmart: lightweight or long lifetime products

KEY TOLLING SERVICES

- Conventional milling
- Cryogenic milling
- Shredding
- Sieving
- Packaging
- Formula processing

Or if it's easier, we are happy to welcome you at our office.

Our product range

Beobase

The Beobase family of compounds offers a total solution for a new generation of bio-based materials with a matching look and feel. Beobase compounds are obtained by adding bio-based fibres to a fossil polymer or by replacing fossil-based polymers by bio-based ones. Fillers include wood or other fibrous plant material.

Beograde

The Beograde family of compounds includes mainly blends of fossil and bio-based biodegradable polymers. We increasingly replace the plastic substrate by a biodegradable alternative. Adding wood creates a look and a feel that emphasizes the biodegradable characteristics.

Beocycle

The Beocycle family includes compounds based on recycled material. In this range we gradually replace prime and virgin feedstock by recycled material, along with recyclable, non-virgin fillers.

Beosmart

The Beosmart family of compounds still contain fossil-based feedstock, yet they present features that make the final product more sustainable by reducing the weight or by increasing the lifespan of the product.

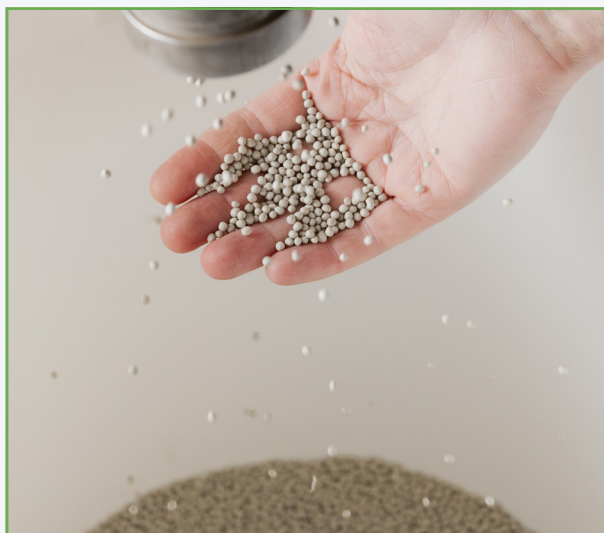

History

Beologic started in 2000, focusing on high-quality Wood Plastic Polymers. We've grown significantly, thanks to our development and customer service approach. Our customers continue to push us to create better and more sustainable materials every day.

Compared to when we were founded, our product range has extended significantly, while our personal approach towards our clients remained the same. Today, Beologic has evolved into a manufacturer of compounds focused on recycled polymers and natural fibers with an annual capacity of 36.000 metric tons. We're eager to boost our output in the coming years.

Beologic in figures

- More than 400 different polymer compositions
- 36.000 metric tons production
- 35 employees
- 3 hectare site in Belgium
- Sales in more than 20 countries
- 7 tolling services
