LEVACO Chemicals GmbH has its headquarters and chemical production site in the Chempark Leverkusen.

Our products are used in the segments of agricultural formulations, fibre manufacturing, paints and coatings.

The experienced teams of the business units convince with in-depth knowledge of the development, production and use of these products for the specific markets.

We are member of LEVACO Chemicals Group.

FIBRE SOLUTIONS

With passion for your fibre

Your competent partner in auxiliaries for man-made fibre!

The Fibre Solutions team offers more than just chemicals for the man-made fibre industry. Our team of experts works in close cooperation with customers and partners in finding tailor-made solutions to their specific needs. We offer new innovative spin finishes, advancements in process chemicals and the optimization of production processes.

The LEVACO Fibre Solutions team has decades of experience in the fibre industry and is ready to assist you worldwide, 24/7.

Our product range includes auxiliaries for:

ACRYLIC

VISCOSE

POLYAMIDE

POLYPROPYLENE

POLYESTER

HYGIENE

ACRYL

- Lubricants, antistatic agents and softeners
- For staple fibres or tow (to tops)
- For dry spun or wet spun PAN
- For greige or dope dyed/gel dyed fibres

VISCOSE

- Activator, modifier, spin bath additives, antistatic agents and lubricants
- For staple fibre and filament yarn

POLYAMIDE

- For POY spinning combined with special additives to protect elastane knitwear
- FDY finishes for weaving or ATY
- BCF finishes for greige or dope dyed with superior uniformity

POLYPROPYLENE

- BCF and CF finishes for filament yarn
- Finishes for staple fibres for different applications
- Staple fibre finishes for technical nonwoven

POLYESTER

- For POY spinning, std or micro fibres
- FDY finishes for knitting and weaving yarn, conventional or WINGS spinning
- BCF finishes
- Staple fibre finishes for technical nonwoven

HYGIENE

- Tox approved durable hydrophilic surfactants for topsheets/core wraps/ ADL and more
- Spin finishes for durable hydrophilic staple fibers and spunbond
- Encapsulated botanicals for stabilization and long-term efficiency of active ingredients

LUCRASPIN® STATEMENT

LEVACO's trade name for man-made fibre auxiliaries

We offer innovative and safe surfactants and spin finishes for your needs – from the fibre processing to the final application.

In addition to our responsibility for the environment, our production works to the highest ISO standards in quality, environmental and energy management to continuously improve our performance. Also, we have certified solutions for products that should be Halal or Kosher.

Levaco's Fibre Solutions team assists you in every step fulfilling your market requirements, beginning with health & safety up to process optimization.

We focus for years on products for cellulosic fibres and serve almost all top manufacturers of these kinds of fibres worldwide. Of course, our activities are not limited to cellulosic fibres only, but we believe the textile industry has to shift in the next decades from petro-based fibres to renewable, bio-based alternatives. With our many years of experience in the above-mentioned areas, we are happy to support this change and at the same time also convert our own, partly petro-based portfolio to 100% bio-based.

LEVACO's Fibre Solutions team is your dedicated partner in the fibre industry.
